MANUAL RETRACTION OF THE ROLLERS OFF THE TYRES (HAND REMOVAL TOOL)

In the unlikely event of the rollers not disengaging off the wheel. They can be retracted manually by a hand removal tool.

- 1) **Make Sure the Red Isolation Key is removed & handbrake is applied.**
- 2) Remove the rubber black cover located on the rear of the small Powractor Motor. This reveals a manual release drive spindle.

MANUAL RELEASE DRIVE SPINDLE

- 3) Insert the 'hand removal tool' into the drive spindle. Wind the nut anti-clockwise several times until the tool becomes loose. (There will be no visible movement on the rollers). Use the remote or switch as per normal to disengage the roller off the wheel.

Hand Release Tool engaged onto drive spindle

- 4) As the system is fitted with a reduction gearbox manual retraction off the wheels may take a large number of turns, therefore this is best done with a battery operated drill or screwdriver.

- 5) If in doubt contact a Powrtouch Engineer.
